Art Unit: 1106

Applicants' remarks and amendments filed on November 7, 1996, have been carefully considered. Claims 1-34 remain pending in this application; however, claims 1-11 and 18-34 remain withdrawn from consideration, as these claims are directed to non-elected inventions.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).

Double Patenting

1. Claims 12-17 stand provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-21 of copending Application No. 08/473,688. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims in the '688 application fail to recite any components completing the balance of the gel pH limitations.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

This rejection is being maintained pending the filing of a Terminal Disclaimer should either of these applications be allowed at a later date, or this application will be abandoned in favor of the '688 application, as stated in Applicants' above-filed response.

Art Unit: 1106

Claim Rejections - 35 USC § 103

2. The rejection of claims 12-17 under 35 U.S.C. 103(a) as being unpatentable over Wurzburg, et al. (U. S. Patent No. 3,977,897) has been **withdrawn** in view of Applicants' amendments to claims 12 and 13 and in view of Applicants' persuasive arguments relating thereto.

Wurzburg, et al. disclose a non-chemically inhibited starch prepared by controlled heating. However, the resulting starch is heated in the presence of salts which inhibit swelling and raise the gelatinization temperature of the starch, as opposed to Applicants' claimed step of heating an anhydrous or substantially anhydrous starch.

Although the 103(a) rejection has been withdrawn, the above double patenting rejection is maintained as it has been stated in the previous Office Action. Accordingly, **THIS ACTION IS MADE FINAL**. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for response to this final action is set to expire THREE MONTHS from the date of this action. In the event a first response is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event will the statutory period for response expire later than SIX MONTHS from the date of this final action.

All references of record, including those submitted by Applicants and those cited by the Examiner have been carefully considered; however, the

Art Unit: 1106

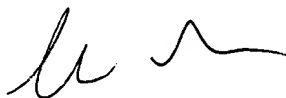

references are not deemed to teach Applicants' claimed steps of dehydrating and heat-treating a non-pregelatinized granular starch to effect thermal inhibition.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lynn Hailey whose telephone number is (703) 308-3317. The examiner can normally be reached on Mondays through Thursdays from 6:30 to 5:00.
